1.3 ¿Qué es el Navegador?

- Un navegador web (en inglés, *web browser*) es un software de aplicación o programa que permite el acceso a la Web, interpretando la información de distintos tipos de archivos y sitios web para que estos puedan ser visualizados.
- Entre los navegadores más importantes están:

- La funcionalidad básica de un navegador web es permitir la visualización de documentos de texto, posiblemente con recursos multimedia incrustados. Además, permite visitar páginas web y hacer actividades en ella, es decir, enlazar un sitio con otro, imprimir, enviar y recibir correo, entre otras funcionalidades más.
- Los documentos que se muestran en un navegador pueden estar ubicados en la computadora donde está el usuario y también pueden estar en cualquier otro dispositivo conectado en la computadora del usuario o a través de Internet, y que tenga los recursos necesarios para la transmisión de los documentos (un *software* servidor web).
- Tales documentos, comúnmente denominados páginas web, poseen hiperenlaces o hipervínculos que enlazan una porción de texto o una imagen a otro documento, normalmente relacionado con el texto o la imagen.
- El seguimiento de enlaces de una página a otra, ubicada en cualquier computadora conectada a Internet, se llama ***navegación***, de donde se origina el nombre navegador Por

1.5 ¿Qué es un Servidor?

- Es una computadora con características más específicas que las computadoras normales, por decir la memoria RAM con más capacidad, uno o dos discos duros con capacidades mayores de almacenamiento, dos microprocesadores, etc.
- La mayoría de los servidores funcionan las 24 horas del día, los 365 días del año o sea no se apagan, estos servidores son los que alojan a los sitios web, es por eso que los sitios web están disponibles cualquier momento que se lo requiera.

1.6 ¿Que es una Base de Datos?

- Una base de datos es un “almacén” que nos permite guardar grandes cantidades de

2. ¿Qué es HTML5?

Es una Lenguaje para crear estructuras de Sitios Web, no es un Lenguaje de Programación sino es un Lenguaje de Enmarcado, que nos permite crear estructuras de nuestros Sitios Web.

Llamamos estructura a un contenido de textos, imágenes, formularios, botones, etc. Los colores, las formas, los tamaños se realizan con otro Lenguaje llamado CSS.

Los archivos que contienen documentos HTML suelen tener la extensión .HTML o .htm

2.1 Características. -

HTML5 provee básicamente tres características:

1. Estructura
2. Estilo
3. Funcionalidad

2.2 Creación de un Documento

- Un documento HTML es un archivo de texto.
- El Archivo debe ser grabado con la extensión **.html** y el nombre que dese (por ejemplo mipaginaweb.html)
- El HTML (Híper Text Markup Lenguaje) tiene dos necesidades y son:

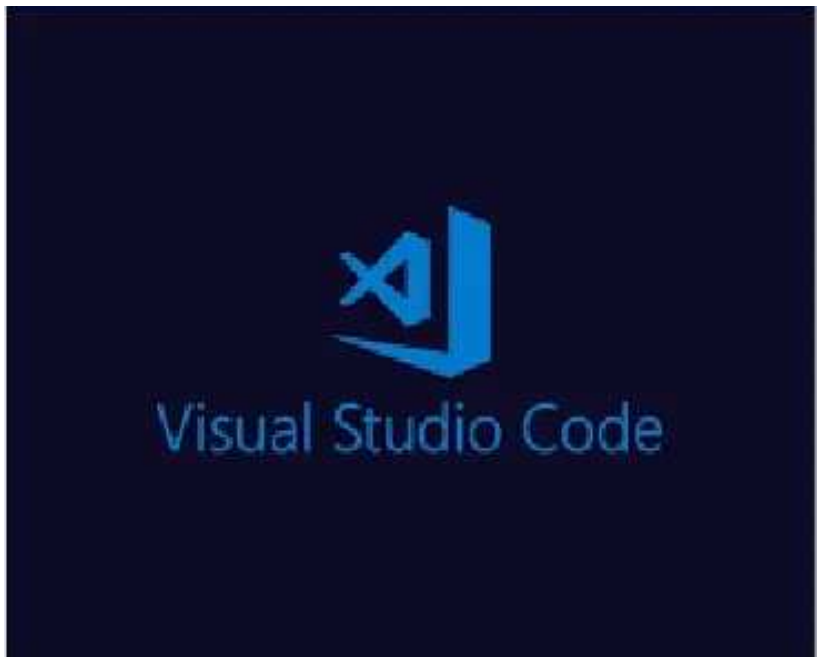
3. EDITOR DE CODIGO → VISUAL STUDIO CODE



Visual Studio Code, también conocido comúnmente como **VS Code** , es un editor de código fuente creado por Microsoft con electrón Framework, para Windows, Linux y macOS.

Las características incluyen soporte para depuración , resaltado de sintaxis, finalización de código inteligente , fragmentos , refactorización de Código y Git integrado . Los usuarios pueden cambiar el tema , los métodos abreviados de teclado, las preferencias y la instalación. Extensiones que agregan funcionalidad adicional.

En la Encuesta para desarrolladores de Stack Overflow 2021, Visual Studio Code se clasificó como la herramienta de entorno para desarrolladores más popular entre 82 000 encuestados, y el 70 % informó que la usa

4.1 Etiqueta: <title> </title>

Esta etiqueta va en la parte del encabezamiento de la página web, es decir en el HEAD, y define en su contenido el título de la página web, mismo que aparecerá en la parte superior izquierda de la pantalla de su navegador.

4.2 Etiqueta <body> </body>

Todo el texto, las imágenes y el formato visibles al usuario deben encontrarse entre las etiquetas <body>...</body>. Esta etiqueta cuenta con los siguientes atributos:

• Bgcolor	define el color de fondo de la página
• Text	define el color del texto de la página
• Link	define el color de los vínculos en la página
• Alink	define el color del vínculo actual o activado en la página
• Vlink	define el color del vínculo ya visitado
• Background	define el archivo gráfico que será desplegado como fondo
• Bgsound	define el archivo de audio que se tocará en la página.[IE]
• Bgproperties	define el movimiento vertical del fondo.[IE]

4.3 Comentarios: <!-- – >

Se utiliza para colocar algunos recuerdos, comentarios o anotes, no se visualiza en el navegador

<!--ESTE ES UN COMENTARIO -- >

 </body>
</html>
```

Bienvenido al Curso de HTML Cuando la temperatura es menor de 15°c hace bastante frío. Este es un ejemplo de página WEB :)

7.Etiqueta

La etiqueta instruye al navegador cliente que inserte un salto de línea en un documento HTML. La etiqueta tiene el mismo efecto que un retorno de carro en una máquina de escribir. Es una etiqueta especial, pues no precisa de etiqueta de cierre.

8. Etiqueta <hr>

La etiqueta dibuja de manera predeterminada una regla horizontal alineada automáticamente, con una apariencia de tercera dimensión. Esta etiqueta especial, porque no necesita de cierre, tiene los siguientes atributos:

- Align → establece que la regla se alinee a la izquierda, centro o derecha

Bienvenido al Curso de HTML
Cuando la temperatura es menor de 15°c hace bastante frío.

Este es un ejemplo de página WEB :)

9. Encabezados

Las etiquetas <h1> </h1> al <h6> </h6> (acrónimos de "heading 1..6") son encabezados del cuerpo del texto. El encabezamiento <h1> nos proporciona las letras de mayor tamaño. Notará que si usamos una etiqueta de encabezamiento, automáticamente se incluirá un retorno de carro al final del mismo. La etiqueta tiene el siguiente atributo:

- **<h1>, <h2>, <h3>, <h4>, <5> y <h6>. -** Nos sirve para dar a nuestro texto diferentes tamaños, por ejemplo, como títulos, subtítulos, etc.

Ejemplo 6:

```
<html>
 <head> <title>Curso de HTML</title> </head>
 <body bgcolor="#C0D9D9" text="#000000">
  <h1 align="center">
  Bienvenidos al curso de HTML</h1><br>
  <hr align=center width=50%><br>
  <h2>Bienvenidos</h2>
  Cuando la temperatura es menor a 15&deg;c hace
  bastante fr&iacute;o.<br>
  <hr align=left width=25% size=5><br>
  Este es un ejemplo de p&aacute;gina WEB :)<br>
</body>
```

bien en otra que contenga solo gráficos. Trate de que el color de fondo de la página (que ya no aparecerá) sea parecido al color principal de la imagen que usará como fondo. Si es necesario reacomode los colores de texto y vínculos.

Supondremos tenemos un gráfico llamado “fondo.gif” para el ejemplo 8 que como notará será reformulado en función a utilizar las nuevas etiquetas.

12.1 Etiqueta <img>

Se trata de otra etiqueta especial, pues no necesita de etiqueta de cierre. Esta etiqueta instruye al navegador para que exhiba la imagen especificada. El formato básico para incluir un gráfico es:

```
<img src=”imagen.ext”>
```

No es necesario redimensionar en forma permanente un archivo gráfico para exhibirlo en contextos variables; sin embargo, el autor de HTML puede indicar al navegador que redimensione la imagen especificando los siguientes atributos:

- Src → identifica la imagen que se desplegará.
- Height → para redimensionamiento de gráfico (en pixeles o en porcentaje)
- Width → para redimensionamiento de gráfico (en pixeles o en porcentaje)

A la imagen se le puede aplicar un borde que se hace notorio especialmente cuando se trata de una imagen que además es un hipervínculo:

- Border → Definido en pixels

La imagen también puede alinearse con respecto al texto:

We and our 41 IAB TCF partners store and access information on your device for the following purposes: store and/or access information on a device, advertising and content measurement, audience research, and services development, personalised advertising, and personalised content.

- Align → Establece la alineación de la tabla o texto mediante ALIGN=LEFT o ALIGN=RIGHT
- Bgcolor → Establece el color de fondo de las celdas de la tabla
- Border → Determina el ancho del borde en pixeles
- BorderColor → Asigna un color al borde
- BorderDark → Determina el color de la parte oscura de un borde de 3 dimensiones
- BorderLight → Asigna el color de la parte clara de un borde de 3 dimensiones
- Caption → Especifica el titulo para la tabla
- Cellpadding → Establece la cantidad de espacio libre junto al contenido de una celda
- Cellspacing → Asigna la cantidad de espacio entre las celdas de una tabla
- Width → Determina el ancho de la tabla en pixeles o en un porcentaje

13.2 Etiqueta <th> </th>

Indica al navegador cliente que exhiba el texto como un encabezado en la primera fila de una tabla. Atributos principales:

- Colspan → especifica el número de celdas que cubre el encabezado
- Align → Determina la posición del texto del titilo

13.3 Etiqueta <tr> </tr>

- Align → Alineación del texto/objetos en toda la fila

13.4 Etiqueta <td> </td>

La etiqueta de datos de la tabla, es la que identifica a las columnas o celdas específicas de una tabla. Atributos principales:

- Type

  Especifica el tipo para listas ordenadas

  - Type=A Usa letras mayúsculas,
  - TYPE=a emplea letras minúsculas,
  - Type=I Usa números romanos grandes,
  - Type=i usa números romanos pequeños
  - Type=1 usa números arábigos.
  - Type también puede servir para definir la forma de la viñeta en las listas no ordenadas.
  - Type=DISC, CIRCLE y SQUARE son las opciones disponibles.
- Value → Indica que se inicie la numeración a partir del número especificado.

Ejemplo 11:

```
<html>

16 Formularios

Ofrece la posibilidad de interactuar con el usuario, nos sirve para recopilar información de el.

16.1 Etiqueta <form> </form>

Define la apertura y cierre de un formulario, dentro estas etiquetas tenemos las siguientes funciones

- Label → Determina el identificador del formulario
- input → Determina el cuadro del formulario.
- name → Determina el valor ingresado en el cuadro del formulario y se almacenara en este
- placeholder → Nos indica al usuario que datos vamos a introducir en el formulario

16.2 Propiedades type

Define la forma de comportamiento dependiendo del valor que contenga esta propiedad y los valores que puede optar son los siguientes:

- submit → Habilita un botón para envió de información introducido anteriormente en el formulario.
- text → Determina que el usuario puede introducir un valor de tipo texto y numeros.
- Email → Determina que el usuario puede introducir un valor de tipo email con una @
- password → Determina que el usuario puede introducir un valor de tipo contraseña. Ocultara el valor con asteriscos.
- file → Determina que el usuario puede introducir un valor de tipo archivo. Nos mostrara un buscador para seleccionar el archivo deseado
- require →Determina que el usuario tiene que introducir obligadamente los valores del

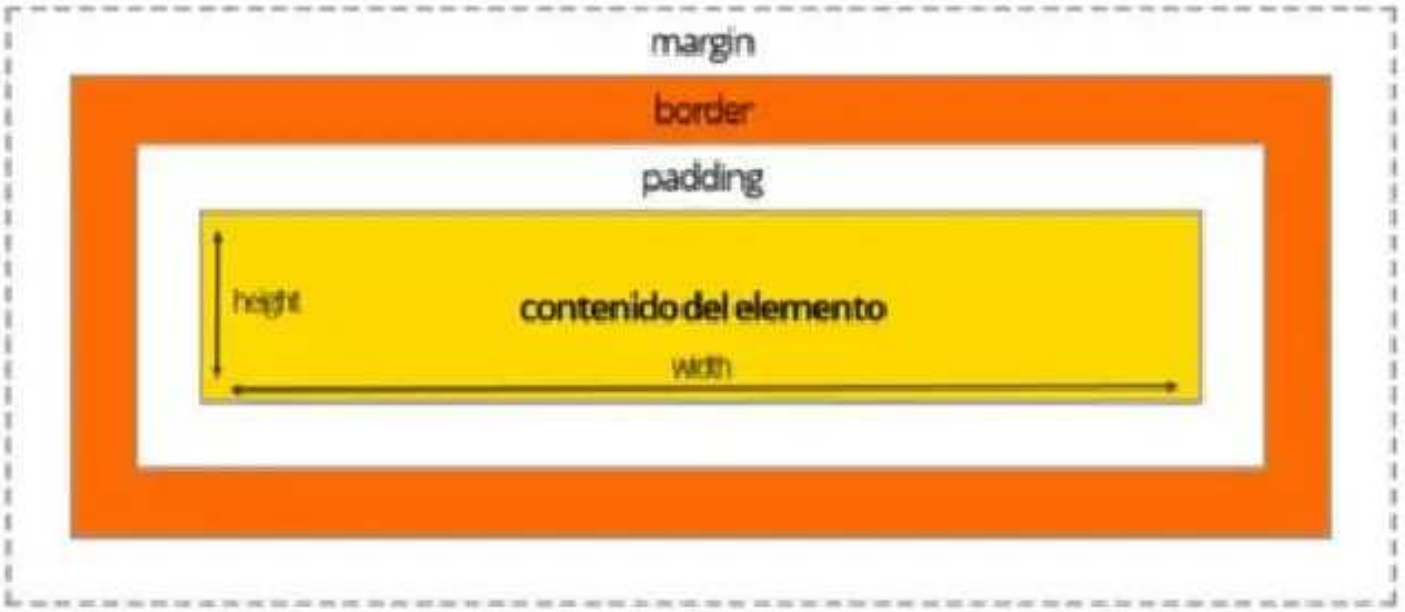
17. HOJAS DE ESTILO - CSS 3

La hoja de estilo en cascada o CSS es un lenguaje usado para definir la presentación de un documento estructurado escrito en HTML y derivados. En las páginas web el lenguaje HTML se usa para estructurar el contenido semánticamente (títulos, subtítulos, texto, etc.) y CSS para la maquetación y estética de este mismo. Este principio es fundamental por muchos motivos. Un ejemplo claro es el "diseño adaptativo" (responsive design): poder adaptar el mismo contenido a diferentes dispositivos. Es decir, que una misma página web se puede visualizar de una manera diferente en un PC, Celular o Tablet.

17.1 Propiedades CSS3 Básicas



- **width**: establece la anchura del elemento. Pueden ser valores absolutos o relativos al contenedor del elemento.

We and our 41 IAB TCF partners store and access information on your device for the following purposes: store and/or access information on a device, advertising and content measurement, audience research, and services development, personalised advertising, and personalised content.
Personal data may be processed to do the following: use precise geolocation data and actively scan device characteristics for identification.
Our third party IAB TCF partners may store and access information on your device such as IP address and device characteristics. Our IAB TCF Partners may process this personal data on the basis of legitimate interest, or with your consent. 13.3 Propiedades CSS3 para Colores y Fondos

- **color**: color del elemento. Es importante notar que existen diferentes formatos para especificar el color como palabras predefinidas ("red", "green", etc.), formato RGB o valor hexadecimales (ver detalles en el material de referencia).
- **background-color**: color del fondo del elemento.
- **background-image**: usar una imagen de fondo.
- **background-repeat**: usar una imagen de fondo como mosaico. Permite diferentes modos de organización de la imagen (ver detalles en material de referencia).
- **opacity**: opacidad del elemento. Va desde 0 (completamente transparente) hasta 1 (sólido). Un valor de 0.5 sería, por tanto, un nivel de transparencia del 50%.

13.4 Propiedades CSS3 para Bordes

- **border**: añade un borde a un elemento y especifica sus propiedades (grosor, estilo de línea, etc.). Ver también el modelo de caja de arriba.
- **border-color**: color del borde.
- **border-style**: diferentes estilos (sólido, rayitas, puntos, etc.).
- **border-radius**: redondear las esquinas de un elemento.

13.5 Otras propiedades CSS3 interesantes

- **float**: propiedad avanzada que permite una maquetación más sofisticada. Posicionar los elementos de manera "flotante". Ver este tutorial básico sobre posicionamiento flotante.
- **clear**: controla el comportamiento de los elementos adyacentes a elementos posicionados de forma flotante. Ver también el tutorial anterior sobre posicionamiento flotante.
- **overflow**: controla el comportamiento de los contenidos que no caben en su elemento contenedor (valores: visible, hidden, scroll, auto, inherit)

Practica 16

Realizar la siguiente maquetación y luego colocar sus estilos.

1. Recuperar la Carpeta con el nombre de → gatito
2. En el archivo estilo.css escribir el siguiente código

```
*{
    margin: 0px;
    padding: 0px;
}

body {
    background-color: gray;
    color: white;
}

.container {
    width: 960px;
    margin: auto;
    margin-top: 20px;
    margin-bottom: 20px;
    border-radius: 20px;
    overflow: auto;
}

.header {
    height: 150;
    background-color: black;
}

h1 {
```

```
.main {
    width: 700px;
    height: 500px;
    background-color: papayawhip;
    float: left;
    margin: auto;
    margin-top: 10px;
    margin-right: 10px;
    border-bottom: 10px;
    color: black;
}

.main h2{
    line-height: 500px;
}
.section {
    width: 250px;
    height: 500px;
    background-color: pink;
    float: right;
    margin-top: 10px;
    color: black;
}

.section h2{
```

We and our 41 IAB TCF partners store and access information on your device for the following purposes: store and/or access information on a device, advertising and content measurement, audience research, and services development, personalised advertising, and personalised content.
Personal data may be processed to do the following: use precise geolocation data and actively scan device characteristics for identification.
Our third party IAB TCF partners may store and access information on your device such as IP address and device characteristics.
